AQUEOUS DISPERSIONS OF LOW-MOLECULAR WEIGHT,  
LOW-MELTING AND WATER INSOLUBLE POLYMERS

Abstract

An aqueous dispersion of (a) 0.1-40% by wt. of a low molecular weight, low melting point, water-insoluble polymer in which the polymer particles have a size <10 microns, and (b) 0.001-30% by wt. of an anionic emulsifier.
